

First, the TA logs in:

StuMasys login

usrnm

pwd

Use case: TA editing mark of student who queried a test mark.

They come to their "home page", which lists the courses they are involved with, and gives a search bar and some other stuff:

Stumasys: Welcome, [insert name here]

enter course, year or "@stunum001"

mam1, 2010
(student)

csc2001f, 2016
(TA)

CRS1000W, 2010
(student)

etc3000w, 2013
(student)

clicks this one

} search bar allows searching for individual students, or for courses?
} bit of a made-up list, but I think the point is made. should probably arrange by the course year.

TA then clicks on the course that is relevant, and it opens that course page:

CSC 2001 F, 2016

☒ Hide irrelevant columns?

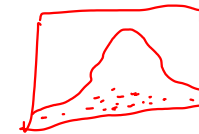

☐ View percentages instead of X/Y marks?

Stu#	test 1 	Prac 1
abcde001	62/80	20/25

Hides final mark/DP/subminima, maybe planned assessments that haven't happened

The little "+" means "expand to see related marks of lower level"

We could provide a little distribution graph, maybe gives copy/pastable info for a vula announcement.

Would be a pretty useful feature I rate

Say the TA expands the test 1 thing,
